

## Intelligent solutions are characterized by their simplicity

*At the ISE 2011 Kindermann presented the combination of CablePorts, the efficient desktop connections, and QuickSelect, which links several CablePorts with one another. Kindermann also introduced Doceri, the new software for the media control via iPad.*

### **CablePorts provide the proper connection**

With CablePort all the connections required at the conference table can be made, e.g. mains, AV, data and network. Due to the new design the unit can be installed level with the desktop and the newly developed flap makes it easier to plug in. The high quality surfaces of anodized aluminium, glass or veneer fit to all styles of conference furniture. The modular construction allows refitting of connections, if needed later.

### **QuickSelect manages the interaction**

If several CablePorts are in use, e.g. in large conference rooms with a flexible array of tables, QuickSelect is a must. It provides all the required interfaces, and due to its modular construction brings up to 16 participants in a line together with a total cable length of up to 120 m. QuickSelect enables each participant to transfer data from his laptop to the projector. In return the leader of the conference is able to contact all the connected devices via the media control and thus retrieve data from one of the participants' PCs and present them.

And the new iPad App "Room Control" makes it even easier: The user can manage the media control Kindermann Pixie Pro NRC via the iPad.

### **Interactive presentation with Doceri**

With Doceri the direct access to all digital media needed for a presentation is possible, e.g. PowerPoint transparencies, PDFs, videos, Web links etc., no matter if they are available on the PC or the internet. Doceri makes the presentation interactive. Via the iPad the lecturer can write, paint or underline texts directly in the PowerPoint presentation, and everything is projected in real time. As writing on the iPad with a finger is not easy, a special pen is delivered.

## Press Release

With Doceri you have also direct access to a Kindermann Pixie Pro NRC media control, and you can easily manage the media and house technology. The Doceri system solution consists of the software for the presentation PC and a free App for the iPad.

**Copy length: 2.265 characters.**

### **The Kindermann profile**

Kindermann, an innovative expert in presentation and conference technology, has an excellent reputation for high quality and user-friendly solutions.

Its comprehensive sales programme, which is one of the biggest of its branch in Europe, consists of a wide range of products from the single projector to the complete equipment of conference rooms. A big percentage of all these products is developed and produced by Kindermann.

The sales programme is divided up into three sectors: "presentation", "installation" and "conferencing".

The sector "presentation" stands for projectors and flat screen displays.

The sector "installation" comprises all system and installation components as well as digital signage.

In the sector "conferencing" Kindermann offers solutions to meet sophisticated demands in the fields of conference technology and modern media. This includes audio and video conferences.

As a manufacturer and distributor, Kindermann supports its dealers by providing them with competent technical advice and individual guidance for projects – including planning a system, supplying the technology, and caring for its integration. Attractive special services round up the portfolio.
